"The beta-glucanase gene from Bacillus amyloliquefaciens shows
extensive homology with that of Bacillus subtills.";
Gene 49:177-187(1986).
-I- CATALYTIC ACTIVITY: Hydrolysis of 1,4-beta-D-glycosidic linkages
-I- CATALYTIC ACTIVITY: Hydrolysis of 1,4-bonds.
-I- MISCELLANEOUS: BETA-GLUCANASES OF BACILLUS HAVE A SUBSTRATE RANGE
SIMILAR TO LICHENASE OF GERMINATING BARLEY.
-I- SIMILARITY: BELONGS TO FAMILY 16 OF GLYCOSYL HYDROLASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    01-JUN-1994 (Rel. 29, Last annotation update)
Beta-glucanase precursor (EC 3.2.1.73) (Endo-beta-1,3-1,4 glucanase)
(1,3-1,4-beta-D-glucan 4-glucanohydrolase) (Lichenase).

Beta-glucanase precursor (EC 3.2.1.73) (Endo-beta-1,3-1,4 glucanase)
[1,3-1,4-beta-D-glucan 4-glucanohydrolase) (Lichenase) (Laminarinase).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           "Cloning the Clostridium thermocellum thermostable laminarinase ger in Escherichia coli; the properties of the enzyme thus produced."; Biotechnol Lett. 12:811-816(1990).

1- CATALYTIC ACTIVITY: Hydrolysis of 1,4-beta-D-glycosidic linkage in beta-D-glucans containing 1.3- and 1,4-bonds.

1- SUBUNIT: MAY FORM PART OF A MULTIENZYME COMPLEX (CELLULOSOME).

1- DOMAIN: A 24 RESIDUES DOMAIN IS REPEATED TWICE IN THIS ENZYME I. DOMAIN: A 24 RESIDUES DOMAIN GELLUM CELLULOSOME ENZYMES. THIS DOMAIN MAY FUNCTION AS THE BINDING LIGAND FOR THE SIL COMPONENT.

MELL AS IN OTHER C. THERMOCELLUM CELLULOSOME ENZYMES. THIS DOMAIN MAY FUNCTION AS THE BINDING LIGAND FOR THE SIL COMPONENT.

1- SIMILARITY: BELLONGS TO FAMILY 16 OF GLYCOSYL HYDROLASES.

J. Biochem. 232:849-858(1995).

-i- CATALYTIC ACTIVITY: Hydrolysis of 1,4-beta-D-glycosidic link in beta-D-glucans containing 1,3- and 1,4-bonds.

-i- MISCELLANEOUS: BETA-CLUCANNSES OF BACILLUS HAVE A SUBSTRATE SIMILAR TO LICHENASE OF GERMINATING BARLEY.

-i- SIMILARITY: BELONGS TO FAMILY 16 OF GLYCOSYL HYDROLASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              MEDLINE=93094208; PubMed=1360982; Hoej P.B., Condron R., Traeger J.C., McA "Identification of glutamic acid 105 at amyloliquefactens 1,3-1,4-beta-D-glucan epoxide-based inhibitors.";

Biol. 37:445-454(1998).

-!- FUNCTION: INVOLVED in cell wall reconstruction.
-!- TISSUE SPECIFICITY: EXPRESSED IN SHOOT APICAL MERISTEMS, ALSO FOUND IN SEEDLINGS AND MERISTEMS.
-!- SIMILARITY: BELONGS TO FAMILY 16 OF GLYCOSYL HYDROLASES.
-!- CAUTION: Ref.1 sequence differs from that shown due to frameshifts in positions 158; 178; 183; 189; 190; 194 and 199.
-!- CAUTION: Ref.6 sequence differs from that shown due to frameshifts in positions 93 and 104.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        85
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       62
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          25
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              L. MICTOBLOL. BIOLECHNOL. 38:507-513(1993).

FUNCTION: HYDROLYSES B-GLUCANS CONTAINING MIXED BETA-1,3 AND BETA-1,4 LINKAGES. THIS ENZYME IS THERMOSTABLE; ITS OPTIMAL TEMPERATURE IS NEAR 65-70 DEGREES CELSIUS.

CATALYTIC ACTIVITY: Hydrolysis of 1,4-beta-D-glycosidic linkages in beta-D-glucans containing 1,3- and 1,4-bonds.

MISCELLANEOUS: BETA-GLUCANASES OF BACILLUS HAVE A SUBSTRATE RANGE SIMILAR TO LICHENASE OF GERMINATING BARLEY.

SIMILARITY: BELONGS TO FAMILY 16 OF GLYCOSYL HYDROLASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         BACBR

-!- PATHWAY: Xylan degradation.
-!- SIMILARITY: IN THE N-TERMINAL SECTION; BELONGS TO CELLULASE FAMI: G (FAMILY 11 OF GLYCOSYL HYDROLASES).
-!- SIMILARITY: IN THE C-TERMINAL SECTION; BELONGS TO FAMILY 16 OF GLYCOSYL HYDROLASES.

MEDLINE-87192007; Nurtz A., Borriss R., Knowles J.;
"The beta-glucanase gene from Bacillus amyloliquefaciens shows extensive bomology with that of Bacillus subtilis.";
Gene 49:177-187(1986).
-1 CATALYTIC ACTIVITY: Hydrolysis of 1,4-beta-D-glycosidic linkages in beta-D-glucans containing 1,3- and 1,4-bonds.
-1 MISCELLANEOUS: BETA-GLUCANASES OF BACILLUS HAVE A SUBSTRATE RANGI SIMILAR TO LICHENASE OF GERMINATING BARLEY.
-1 SIMILARITY: BELONGS TO FAMILY 16 OF GLYCOSYL HYDROLASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Hydrolase;

in Escherichia coli; the properties of the enzyme thus produced.";
Biotechnol. Lett. 12:811-816(1990).

-i- CATALYTIC ACTIVITY: Hydrolysis of 1,4-beta-D-glycosidic linkage
in beta-D-glucans containing 1,3- and 1,4-bonds.

-i- SUBUNIT: MAY FORM PART OF A MULTIENZYME COMPLEX (CELLULOSOME).

-i- DOMAIN: A 24 RESIDUES DOMAIN IS REPEARED TWICE IN THIS ENZYME &
WELL AS IN OTHER C.THERMOCELLUM CELLULOSOME ENZYMES. THIS DOMAIN MAY FUNCTION AS THE BINDING LIGAND FOR THE SL COMPONENT.

-i- CATALYTIC ACTIVITY: Hydrolysis of 1,4-beta-D-glycosidic in beta-D-glucans containing 1,3- and 1,4-bonds.
-i- MISCELLANEOUS: 3ETA-GLUCANASES OF BACILLUS HAVE A SUBSTR.
SIMILAR TO LICHENASE OF GERMINATING BARLEY.
-i- SIMILARITY: BELONGS TO FAMILY 16 OF GLYCOSYL HYDROLASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     "Crystal structure of Bacillus lichenif glucanohydrolase at 1.8-A resolution."; FEBS Lett. 374:221-224(1995).

CATALYTIC ACTIVITY: Hydrolysis of 1,4-beta-D-glycosidic in beta-D-glucans containing 1,3- and 1,4-bonds.

MISCELLANEOUS: BETA-GLUCANASES OF BACILLUS HAVE A SUBSTR SIMILAR TO LICHENASE OF GERMINATING BARLEY.

SIMILARITY: BELONGS TO FAMILY 16 OF GLYCOSYL HYDROLASES.

                                                                                                                                                                                                                                                                 FUNCTION: SHOWS ACTIVITY ON LICHENAN, BETA-GLUCAN AND LAMINARIN BUT NOT ON CMC CELLULOSE OR XYLAN. THE ENZYME HAS A TEMPERATURE OPTIMUM OF 85 DEGREES CELSIUS AND A PH OPTIMUM OF 7.0. CATALYTIC ACTIVITY: Hydrolysis of 1.4-beta-D-glycosidic linkages in beta-D-glucans containing 1.3- and 1.4-bonds. SIMILARITY: BELONGS TO FAMILY 16 OF GLYCOSYL HYDROLASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             NPGYYYAIVNEVNITCYDP
